

## Technical Tip

### How to Read the Date Code on AdvanTech™ Subfloor Adhesive

AdvanTech™ Subfloor Adhesive has a shelf life of 18 months from the date of manufacture in an unopened can when stored correctly<sup>1</sup>. The date of manufacture can be found on the bottom of the can and on the outside of the carton in the form of a one-component date code. Use the information below to determine the date of manufacture from the date code.

The date code will appear as a series of numbers and letters as in the following example:

The designation for the months is as follows:

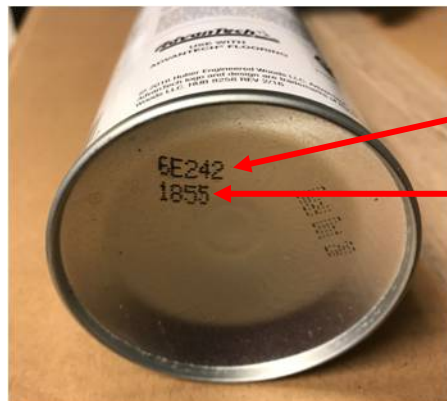

A = January	G = July
B = February	H = August
C = March	J = September
D = April	K = October
E = May	L = November
F = June	M = December

\*The letter **I** is not used.

Also found on the bottom of the can is the time stamp. The time stamp is in the 24 hr format, where the first two numbers are the hours and the second two numbers are the minutes.

Examples:

1855 = 6:55 PM  
0715 = 7:15 AM

Date Code

Time Stamp

<sup>1</sup> Product will keep for 18 months in unopened can when stored between 60°F and 90°F. Storage below 60°F and above 90°F may reduce shelf life. Do not store above 122°F.
