

Seasons change, but your indoor comfort shouldn't.

Air leakage can increase energy costs because it makes heating and cooling systems work harder to keep your home cool in the summer and warm in the winter. With ZIP System® sheathing and tape, you can build in protection against air leakage and possible moisture damage within your walls. ZIP System sheathing and tape is a revolutionary solution for exterior walls and roofs with a built-in moisture barrier and air-tight, taped seams, to keep air and moisture out and energy savings and comfort in.

Why top builders choose ZIP System® sheathing and tape

ENERGY EFFICIENT AIR BARRIER

If your home's walls are not well sealed, it could cost you a lot of money on your energy bills. Fortunately, your home is well-built with a system that reduces air leakage into and out of your walls, protecting the R-Value of your insulation. Housewrap simply can't compete; it must be properly installed with fasteners, caulked and sealed, which rarely happens.

BUILT-IN WATER RESISTANT BARRIER

During construction, your home is exposed to the elements. But with ZIP System sheathing and tape, the water resistive barrier is built into the panel, which protects your walls from water. In fact, these panels have a 180-day exposure guarantee¹ and there's absolutely no need for housewrap.

ENHANCED STRUCTURAL DURABILITY

ZIP System sheathing and tape is an innovative engineered wood panel, created to give your home long-lasting strength. With a unique combination of high wood density and moisture fighting resins ZIP System® sheathing stands strong against the elements during your build and provides a sturdy base you can depend on over time.

PEACE OF MIND

We are so confident in ZIP System sheathing and tape, that we back it with a 30-Year Limited Warranty.¹ And if you ever decide to sell your home, the fact that it's built with high-quality, durable materials will likely impress prospective buyers.
